

Time-To-Task Worksheet Search and Rescue: Drag and Carry

The following is a list of general information and expectations regarding these evolutions:

1. These sheets are intended to be used in whatever training or acquired structure your department may have. These sheets are not limiting you to a specific building type or configuration.
2. These sheets are intended to generate specific times for specific tasks. As a result, these sheets can be considered to be stand alone. If a full-scale evolution (e.g. forcible entry combined with a search and victim removal) is conducted, please break the timing down into the individual sheets for documentation.
3. These sheets can include repetitions of tasks — utilizing either the same or different personnel. The fifth sheet provides locations to include the timing of multiple runs of the task. This will help in gathering enough data for appropriate averaging for your department.
4. If you have questions or would like to share results with the FSRI team, please email us at fsri@ul.org using the subject line: ***Time-To-Task (Department Name)***. Information shared with us will help improve our timing data set as we work to share time-to-task results in the future. Your department will not be identifiable in any publicly shared data sets.

Rescue Drags and Carries

Basic Information Needed	Description
<input type="checkbox"/> Structure type (acquired structure, fire station, training prop):	
<input type="checkbox"/> Total distance of drag/carry (in feet):	
<input type="checkbox"/> Flooring material in structure (carpet, tile, concrete, etc.):	
Provide dimensioned sketch w/ travel routes on next page.	
<input type="checkbox"/> Are there any turns along the pathway?	
<input type="checkbox"/> If yes, number of turns (e.g. 2 right turns, 1 left turn):	
<input type="checkbox"/> Are there any stairs along the pathway?	
<input type="checkbox"/> If yes, number of stairs (e.g. 1 set of 3 stairs, 1 single stair):	
If victim removed through the doorway:	
<input type="checkbox"/> Did the door need to be opened before removal?	
<input type="checkbox"/> Door opening (height, width):	
If victim removed through the window:	
<input type="checkbox"/> Window opening (height, width, sill height):	
<input type="checkbox"/> Describe window (metal training window vs. actual glass window):	
<input type="checkbox"/> Did window need to be taken before removal?	
<input type="checkbox"/> What was the victim wearing? (unclothed, clothed, or PPE):	
Experiment Specific Information Needed	Description
<input type="checkbox"/> Was visibility impaired?	
<input type="checkbox"/> If yes, please explain how:	
If carry:	
<input type="checkbox"/> Approximate elevation of victim's head:	
<input type="checkbox"/> What was the method of the carry?	
If drag:	
<input type="checkbox"/> Approximate elevation of victim's head:	
<input type="checkbox"/> What was the method of the drag?	
<input type="checkbox"/> Were any straps/ropes/tools used?	
<input type="checkbox"/> If so, please explain how:	
<input type="checkbox"/> Was any of the above pre-deployed?	
<input type="checkbox"/> Did the drill begin at the victim location?	
<input type="checkbox"/> If no, please describe prior actions:	
Describe Firefighter PPE Status:	
<input type="checkbox"/> Were firefighters in full set of turnout gear including gloves?	
<input type="checkbox"/> If no, please describe gear worn:	
<input type="checkbox"/> Were firefighters wearing SCBA during the evolution?	
<input type="checkbox"/> If so, were they breathing air?
